

AKSHAY JAGTAP

DATA ANALYST

Bengaluru | akshay.jagtap.we@gmail.com | [Linkedin](#) | +919168099819

SUMMARY

Data Analyst with 4 years of experience driving adoption, engagement, and quality insights for AI Assistants across Cisco products. Skilled at defining metrics, uncovering user behavior patterns, and delivering insights that shaped adoption strategies and new feature development. Strong in Python, SQL, Tableau, Databricks, A/B testing, with a proven record of building dashboards and data models that scale with business growth for leadership decision-making.

TECHNICAL SKILLS

Languages/Tools	: Excel, SQL, Python (pandas, NumPy, scikit-learn), Tableau, Amplitude, Power BI, Pyspark, Looker
Data Platforms	: Snowflake, BigQuery, Databricks, AWS (S3, Athena, SageMaker)
Techniques	: Cohort Analysis, A/B Testing, User Behaviour Analysis, Funnel Analysis, EDA, Feature Engineering, Classification, Regression, Time-Series, Clustering
Other Skills	: Data Modelling, ETL, Data Pipelines, Product analytics, PRDs, Model Deployment & Monitoring (SageMaker)

PROFESSIONAL EXPERIENCE

Cisco – Data Analyst (AI Team) Aug 2023 – Present (2 years 3 months)

- Led end-to-end development of executive-level analytics for AI Assistants across multiple Cisco products, building 5+ Tableau dashboards (Adoption, Customer Overview, AI quality, LLM deep-dive, User Intent) serving insights to stakeholders including senior leadership
- Partnered with product and data engineering teams to ingest product telemetry into Databricks/Snowflake; built complex SQL custom tables; created new features and curated tables powering self-serve analytics
- Automated user-intent classification using LLMs in Python notebooks, categorising 100K+ assistant prompts into prioritised themes; exposed live intent trends in Tableau to guide ML training and product roadmap decisions
- Launched 'In-Context Nudges' feature after identifying adoption gaps; coordinated implementation with engineering, set up Amplitude instrumentation, and delivered 20% lift in user engagement through experiment analysis
- Improved data governance by establishing region-specific data residency across workspaces; orchestrated dbt pipelines to unify regional data tables while maintaining compliance and dashboard stability
- Delivered monthly executive readouts on assistant adoption and engagement metrics, informing roadmap and investment decisions for senior product leadership

Armorblox – Data Analyst Jan 2022 – July 2023 (1 year 7 months)

- Developed and deployed custom regex patterns to detect malicious HTML attachments in emails, improving in-production phishing and malware detection accuracy.
- Collaborated with the ML engineering team to integrate new detection rules into the production model pipeline, strengthening email security coverage for enterprise clients.
- Automated pseudo-labeling pipeline in Python(snorkel), reducing manual effort by 50%
- Built phishing analytics dashboards for threat classification and security monitoring

EDUCATION

PGDM (MBA) - Business Analytics

Jul 18 - May 20

Welingkar Institute of Management and Research, Bengaluru.

BE - Electrical Engineering

Jun 13 - May 16

NBN Sinhgad School of Engineering, Pune.

PROJECTS

TicketWise – End-to-End Data Science Solution (AWS)

- Worked on the TicketWise support-ticket dataset to improve routing and resolution by deploying a monitored SageMaker model; 40% faster resolution, 94% routing accuracy, 60% less manual effort.

Insights for Expense policy Suggestion Feature

- Designed and engineered custom feature-engineering tables from raw transactional and policy data, enabling robust analysis of 40+ organizations' expense behaviors.
- Performed correlation and segmentation analysis to identify high-impact customer groups, generating actionable insights that informed prioritization of the Expense Policy Suggestion feature rollout.

Amazon Mini TV – "Bites" Preview Feature (Upraised PM Program)

- Authored PRD and RICE prioritization for the "Bites" swipe-up video preview feed, addressing low content awareness (80% unaware) and user drop-off by improving discoverability and engagement.
- Outlined adoption, engagement, and revenue KPIs (e.g., previews watched, ad impressions, new users via shares) and crafted a go-to-market plan with beta testing to validate user behavior before full rollout.

ADDITIONAL INFORMATION

- **Languages** : English, Hindi, Marathi
- **Certifications** : Generative AI for Data Analysts specialisation (IBM) - 2025
Product Management (Upraised) - 2024
- **Awards/Activities** : Cisco "You Inspire" Award
